Professional Summary

Computer Science Engineering (AI/ML) student with strong foundations in **Python** and **Data Structures**, focused on building real-world, scalable applications. Experienced in **AI-driven** and **full-stack development**, with growing expertise in **DevOps** and **cloud automation**. Passionate about problem-solving, performance optimisation, and continuous learning.

SKILLS SUMMARY

- Languages:** Python, SQL, Java
- Core Competencies:** Data Structures and Algorithms, Machine Learning, NLP
- Libraries and Frameworks:** Pandas, NumPy, Scikit-learn, spaCy, NLTK
- DevOps and Cloud:** Git, Docker, CI/CD Concepts, Google Cloud Platform (GCP)
- Tools:** Tableau, Excel, Jupyter Notebook, VS Code
- Soft Skills:** Problem-Solving, Team Collaboration, Learning Agility

PROJECTS

Resume Parser (NLP / AI Project) | [LINK](#)

- Built an AI-based resume parser to extract structured data (skills, education, experience) from unstructured resumes using Python and NLP techniques with spaCy and regex
- Expanded text preprocessing, tokenisation, and entity extraction pipelines to accurately identify and organise candidate information
- Reduced manual screening effort by 60% and enabled scalable, consistent candidate data analysis across 100+ resumes

AI Powered Learning Companion (AI System Project) | [LINK](#)

- Designed an AI-driven personalised learning system to recommend content and adapt learning paths based on user interaction
- Integrated intelligent recommendation logic, improving user engagement and learning efficiency for 50+ users.
- Built a scalable architecture integrating AI concepts with real-world application design, focusing on usability and adaptability

Early Alzheimer's Disease Detection (ML Project) | [LINK](#)

- Architected a machine learning model for early Alzheimer's detection using medical dataset features, achieving 85% to 90% classification accuracy
- Executed data preprocessing, feature selection, and model training pipelines using Python with scikit-learn and pandas
- Enhanced prediction reliability by optimising models and validating performance using evaluation metrics including accuracy, precision, and recall

Mom's Magic (Full Stack Project) | [LINK](#)

- Engineered a full-stack food ordering platform using React.js, Node.js, and database integration, enabling seamless user interaction
- Implemented authentication, dynamic menus, and an order management system, improving application functionality
- Crafted a responsive UI and optimised backend workflows for efficient data handling and user experience

WORK EXPERIENCE

Artificial Intelligence Intern | PINNACLE LABS | [VERIFY](#)

Feb 2026 – Mar 2026

- Applied and optimised an NLP-based resume parsing solution as part of internship tasks using Python and text processing techniques
- Worked on real-world AI use cases, implementing data extraction pipelines and collaborating on task-based deliverables
- Improved efficiency of resume screening by automating data processing, resulting in faster and more consistent candidate evaluation, which decreased review time by 40%

EDUCATION

C.V. Raman Global University

Bachelor of Technology - Computer Science Engineering (AI and ML)

Bhubaneswar, India

Aug 2023 – Present

CERTIFICATIONS

- AI for Students: Build Your Own Generative AI Model – NxtWave (2025) | [LINK](#)
- Google Cloud Fundamentals: Core Infrastructure – Google Cloud (2026) | [LINK](#)
- Graphs Camp (Data Structures and Algorithms) – AlgoUniversity (2026) | [LINK](#)
